

CONTENTS

Abstract	3
Introduction	9
PART 1. Features of train ferry transportation	11
1.1 Historical aspects of evolution and operation of train ferry transport	11
1.2 Mechanical appliances of train ferries and fasteners for rail cars	37
1.3 Analysis of statistical data on damage of freight cars in train ferry transportation	46
<i>Conclusions to Part 1.</i>	51
PART 2. Determination of forces on car body in ferry transportation ..	52
2.1 Analysis of the basic forces on the car body in ferry transportation ..	52
2.2 Mathematical modelling of forces on car bodies in ferry transportation	61
2.3 Computer modelling of dynamic loads on the freight car body in train ferry transportation	76
2.4 Determination of strength characteristics for the carrying structure of a car body in ferry transportation	83
2.4.1 Determination of strength characteristics for the carrying structure of an open car body in ferry transportation	83
2.4.2 Determination of strength characteristics for the carrying structure of a tank car in ferry transportation	98
2.4.3 Determination of strength characteristics of the carrying structure of a boxcar in ferry transportation	107
2.4.4 Determination of strength characteristics in the carrying structure of a hopper car in ferry transportation	119
2.4.5 Determination of strength characteristics of the carrying structure of a flat car in ferry transportation	131
2.4.6 Determination of strength characteristics of the carrying structure of a passenger car in ferry transportation	140
<i>Conclusions to Part 2.</i>	151

PART 3. Improvements in the carrying structure of a car body for more reliable fixation on the ferry decks	153
3.1 Design of the structural unit of a car body for reliable fixation on the ferry deck	153
3.2 Determination of strength characteristics of the carrying structure of a car with the new fixation pattern	160
3.2.1 Determination of strength characteristics of the carrying structure of an open car	160
3.2.2 Determination of the strength characteristics of the carrying structure of a tank car	169
3.2.3 Determination of the strength characteristics of the carrying structure of a boxcar	176
3.2.4 Determination of the strength characteristics of the carrying structure of a hopper car	185
3.2.5 Determination of the strength characteristics of the carrying structure of a flat car	195
3.2.6 Determination of the strength characteristics of the carrying structure of a passenger car	202
3.3 Improvements in the pattern of interaction between the car body and the ferry deck	208
3.3.1 Structural peculiarities of the unit for fixation of cars on the deck	208
3.3.2 Mathematical modelling of dynamic loads on the open car body in ferry transportation	209
3.3.3 Computer modelling of dynamic loads on the open car body in ferry transportation	212
3.3.4 Verification of dynamic loading models of on open car body	216
3.4 Improved structure of a passenger car body for stable securing on the ferry deck	217
3.4.1 Structural peculiarities of the device for fixation of a passenger car body on the deck	217
3.4.2 Determination of dynamic loads on the improved passenger car body in ferry transportation	218
3.4.3 Strength calculation for the improved passenger car body in ferry transportation	219
<i>Conclusions to Part 3</i>	221

PART 4. Determination of dynamic loads and strength of containers in the combined train transported by a ferry	224
4.1 Modelling the dynamic loads on a dry-cargo container in the combined train in ferry transportation	224
4.2 Modelling of the dynamic loads of a tank container in the combined train in ferry transportation	233
4.3 Computer modelling of the dynamic loads of containers during ferry transportation	238
<i>Conclusions to Part 4</i>	244
PART 5. Experimental research into the strength of an open car body during interaction with reusable lashing devices on the train ferry	246
5.1 Experimental research into the strength of open car body elements in ferry transportation during sea disturbance	246
5.2 Experimental research into the strength of open car body elements equipped with special units for fixation of chain binders	255
5.2.1 Place and conditions of the research	255
5.2.2 Determination of statistical characteristics of experimental data	265
5.2.3 Comparative analysis of the theoretical and experimental data on the strength of body elements equipped with special units for fixation of chain binders	267
<i>Conclusions to Part 5</i>	271
