

## Contents

INTRODUCTION	1
<b>SECTION 1</b>	
<b>ORGANIZATIONAL AND METHODOLOGICAL APPROACHES TO THE IMPROVEMENT OF MOTOR FUNCTION TAKING INTO ACCOUNT THE ASYMMETRY OF 3–5 YEARS OLD CHILDREN DURING MOTOR ACTIVITY</b>	2
1.1. Peculiarities of the organization of the process of physical education with preschool children	2
1.2. Improving motor function with respect to the motor asymmetry of 3-5 years old children	11
Conclusions to the section 1	22
<b>SECTION 2</b>	
<b>INCREASING THE ADAPTIVE CAPABILITIES OF 6-7 YEARS OLD CHILDREN TO THE CONDITIONS OF EDUCATION IN PRIMARY SCHOOL BY MOTIONAL ACTIVITY MEANS</b>	
2.1. The role of adaptive processes for 6-7 years old children under the conditions of schooling	24
2.2. Peculiarities of increasing the adaptive capacity of 6-7 years old children to the conditions of learning in primary school by physical education means	32
Conclusions to the section 2	43
<b>SECTION 3</b>	
<b>SELF-CONTROL OF ADOLESCENT BEHAVIOR DURING MOTOR ACTIVITY</b>	
3.1. Theoretical and methodological aspects of adolescent behavior's self-control	45
3.2. The specificity of adolescent behavior's self-control during motor activity	50
Conclusions to the section 3	68

## **SECTION 4**

### **PECULIARITIES OF MOTOR ACTIVITY**

<b>OF THE ELDERLY</b> .....	71
4.1. Physiological requirement of the elderly in motor activity . . .	72
4.2. Peculiarities of motor activity and aging processes for the elderly .....	76
4.3. Analysis of the elderly's motor activity .....	78
4.4. Biological age and rate of the body's aging of the people under study. ....	80
4.5. Diagnosis of self-assessment of mental states of the elderly and their need for activity. ....	82
Conclusions to the section 4. ....	84
References .....	87
