

TABLE OF CONTENTS

INTRODUCTION	5
1. PHYSICO-CHEMICAL BASIS OF THERMOCHEMICAL PRESSING	6
1.1. Thermodynamic analysis of thermochemical reactions	6
1.1.1. Calculation of adiabatic temperatures of intermetallic formation reactions	6
1.1.2. Calculation of enthalpy of formation and Gibbs energy of intermetallics in a wide temperature range	12
1.2. Thermokinetic analysis of thermochemical reactions	23
1.2.1. Conditions of interaction of intermetallic systems at non-stationary temperature regimes	24
1.2.2. Determination of the activation energy of <i>Ni-Al</i> and <i>Ti-Al</i> intermetallic systems	27
1.2.3. Calculation of the depth of chemical transformation in the process of high-temperature synthesis	33
1.3. Modeling the processes of structure formation of intermetallic alloys	36
2. MATERIALS AND METHODOLOGY OF EXPERIMENTAL RESEARCH	49
2.1. Objects, materials and equipment	49
2.2. Methodology of the experiment	55
2.2.1. Testing and control of materials	55
2.2.2. Planning and processing of experiment results	56
2.3. Preparatory stage of thermochemical pressing	60
2.4. Hot deformation of synthesis products	69
3. MODELLING OF PROCESSES OF THERMOPLASTIC PROCESSING OF INTERMETALLIC ALLOYS UNDER NON-STATIONARY TEMPERATURE CONDITIONS	77
3.1. Modelling of deformation and rheological parameters for the production of intermetallic alloys under conditions of thermoplastic treatment	78

3.2. Numerical analysis of the influence of technological parameters on the structure formation processes	85
3.3. Effect of hot deformation on the structure formation and properties of intermetallic alloys	92
3.4. Development of intermetallic alloys with high level of physico-mechanical and operational properties	101
4. PRACTICAL VALUE OF MATERIALS OBTAINED BY THE THERMOCHEMICAL PRESSING METHOD	110
4.1. Research on heat resistance of intermetallic γ - <i>TiAl</i> alloy	110
4.2. Research of intermetallic alloys for aerospace engineering parts	114
4.3. Study of the possibility of using intermetallic catalysts in the oxidation processes of carbon monoxide (II) and hydrocarbons	123
4.4. Study of thermogravimetric indicators of cermets with an intermetallic structure	127
4.4.1. <i>TiN-Ni</i> Systems	128
4.4.2. <i>TiN-Mo</i> Systems	132
4.4.3. <i>TiN-W</i> Systems	136
CONCLUSIONS	142
