

TRAVEL BUSINESS

Scientific researches in the field of tourism turned out to be extremely popular for the effective development of Ukraine in the 21st century. One of the main directions of research is the methodology of an adequate assessment of the level of availability of various resources at a given territory and the organization of their rational use. These studies are based on theoretical principles and approaches to the spatial organization of the economy.

A significant amount of scientific works in the field of spatial economics belongs to Professor V. F. Semenov. He stood at the origins of the formation of this branch of science. Particular attention in his works is focused on the problems of regional development in a market economy.

Further development of these studies laid the foundation for the formation of a methodology for the formation of an effective tourism space and environment in the coastal regions of Ukraine. Tourism space is the main concept in the science of tourism, which covers all areas of the tourism business in the relevant territory.

At Odessa National Maritime University, the research of Professor Semenov was continued in the work of scientists of the department “Entrepreneurship and Tourism”: I. V. Savelieva, N. G. Grebenik, Yu. V. Mikhaylova, V. V. Shcherbina, A. M. Ivanov, Yu. O. Navrozova.

The scientists of the Department of Entrepreneurship and Tourism guided by the Doctor of Economics, Professor I. V. Savelieva see the further development and stabilization of coastal recreational and tourist spaces in the subsequent intensification of entrepreneurial activity, infrastructure development, in-depth scientific research of the spatial economics concept. In recent years, textbooks, monographs, and scientific articles on this topic have been published here. Applications for resolving cluster policy issues in the coastal regions are included in the training programs for specialists in tourism, hotel and restaurant business.
