

CONTENTS

THE GLOBAL TRANSFORMATION OF FOOD SYSTEMS

Chapter 1

Craft winemaking as a platform for innovative development of wine tourism in Ukraine (Chernykhivska A. V.)	2
1. Regional differentiation and spatial transformation of viticultural regions of Ukraine and their wine tourism potential	4
2. Craft winemaking in the formation and development of wine tourism	12
3. SWOT analysis and conceptual model of Ukrainian craft wine tourism development	25

FOODTECH AS A DRIVER OF INNOVATIONS IN THE FOOD INDUSTRY

Chapter 2

Bean future: the trend toward vegan products of the new generation (Andrieieva S. S., Dikhtiar A. M.)	37
1. Smart vegan food tech: innovative technologies for the production of plant-based products	39
2. Bean future food tech: technologies, structure, and innovations in next-generation vegan products	45
3. Bean future gastro innovations: developing technologies for next-generation vegan products	58

Chapter 3

Theoretical and practical aspects of fermented hummus production with starter cultures (Doronin K. A.)	70
1. Factors determining the quality of fermented legume products	71
2. Technology of fermented hummus	74
3. Study of the fermented hummus quality	78

Chapter 4

Theoretical aspects of the use of dry semi-finished products based on oleogels in the technology of foamy dessert products (Kotliar O. V.)	88
1. Analysis of the current state and prospects for the development of technologies for dry semi-finished products based on oleogels for foamy dessert products	90
2. Theoretical aspects of the formation of foamy and foam-emulsion food systems	95

3. Scientific justification of the recipe composition and technological process for the production of dessert products using dry semi-finished products based on oleogels	96
4. Development of technology for dessert products using dry semi-finished products based on oleogels	103

Chapter 5

Fermentation of Vicia Faba Bean Protein Concentrate for the Development of Plant-Based Beverages (Litvinov A. O.)

1. Vicia faba L. beans as a promising raw material for the production of plant-based fermented products	113
2. Investigation of the fermentation of Vicia faba bean protein concentrate	116

Chapter 6

Optimization of the buttermilk fermentation process in the technology of low-lactose yogurt (Serenko A. A., Yudina T. I., Hnitsevyh V. A.)

1. Definition of prerequisites and formulation of the research problem	129
2. Substantiation of technological parameters for the production of low-lactose yogurts based on buttermilk	135

Chapter 7

Innovative technology of non-alcoholic health beverages (Tkachenko L. V., Vitriak O. P., Martsyn T. O.)

1. Characteristics of herbal medicinal raw materials in the technology of non-alcoholic health beverages	147
2. Technology and comprehensive quality assessment of new non-alcoholic beverages	151

A BALANCED DIET AND SUSTAINABLE DIETS

Chapter 8

Use of the dietary supplement “Buckwheat Fiber” in the production of flour confectionery products (Yevlash V. V., Kobasa I. M., Hazzavi-Rohozina L. V.)

1. Analysis of the possibility of using non-traditional types of raw materials in the production of flour confectionery products	163
2. Using buckwheat husks as a valuable food ingredient	165
3. Justification of the technology for manufacturing flour confectionery products using the dietary supplement “Buckwheat Fiber”	167
4. Research results and their discussion	169

Chapter 9

Healthy bakery products for the complete nutrition of the population (Kichura D. B., Sobeckho I. B.) 181

1. Bakery production, product classification and basic principles of technological processes. 182
2. Obtaining bakery products with increased nutritional value. 186
3. Development of new technologies for health-promoting bakery products. . 192

Chapter 10

Functional health products based on polysaccharides (Kichura D. B., Sobeckho I. B.) 208

1. Main polysaccharides and their use in the food industry. 209
2. Use of polysaccharides as functional additives. 213
3. The effect of polysaccharide modification on their properties. 216
4. Waste-free, environmentally friendly technology for the production of pectin concentrate. 221
5. Modern biotechnological applications. 226

Chapter 11

Innovative technologies of health-promoting flour confectionery products (Kravchenko M. F., Romanovska O. L., Danyliuk I. P.) 234

1. Scientific substantiation and development of technologies for flour confectionery products based on alternative raw materials. 236
2. Technology and quality of flour-based confectionery products of health-oriented purpose. 242

Chapter 12

Technology of mousse desserts with reduced energy value (Medvedieva A. O., Antoniuk I. Yu.) 250

1. The emergence of prerequisites and formulation of the problem. 250
2. General characteristics of the process of production of mousse desserts in restaurant establishments. 251
3. Analysis of mousse dessert technology. 253
4. Innovations in mousse dessert technology. 256
5. Research results. 258

Chapter 13

Scientific foundations of the creation of a complex of technologies for special-purpose food products (Pylypchuk O. S., Nikolaienko M. S.) 265

1. General concepts of nutrition, meaning, functions. 267

2. International experience in organizing school meals	271
3. School meal reform in Ukraine	282

Chapter 14

Development of technology for curd desserts with honey and saffron for athletes during the recovery phase

(Slyvka N. B., Mykhaylytska O. R., Skulska I. V.)	287
1. Preparation of a curd base for dessert	289
2. Justification and technological aspects of introducing saffron into curd desserts	290
3. Determining the amount of beekeeping products in the recipe of a curd dessert	292
4. Technology of curd dessert and its recipe	294

FOOD SAFETY, AUTHENTICITY, AND TRACEABILITY

Chapter 15

Production of bread with improved properties based

on spontaneous sourdough (Palianytsia L. Ya., Berezovska N. I.) 303

1. Analysis of research and publications on spontaneous sourdough bread production	304
2. Study of the features of spontaneous sourdoughs in bread technology	307
3. Properties of bread produced using spontaneous sourdoughs	314

Chapter 16

Multisensory IoT systems for food quality and safety monitoring in the context of ESG and Industry 4.0 (Tkachuk T. I.) 321

1. Architecture of multisensor IoT systems for the food industry	323
2. Sensor modalities and data fusion methods in food quality monitoring systems	325
3. IoT monitoring systems as an enabler of ESG strategy in the food industry	327

Chapter 17

Integration of the HACCP food safety management system into the technology of thermostable sauces (Yanushkevych O. I., Hrynchenko N. H., Serik M. L.) 333

1. Theoretical foundations of integrating the HACCP food safety management system into food production	334
2. Scientific and practical aspects of HACCP implementation in thermostable sauce technology	337

3. Evaluation of the effectiveness of HACCP system integration and prospects for improving thermostable sauce technology	348
--	-----

SENSORY AND CONSUMER RESEARCH

Chapter 18

Sensory analysis and profiling of organoleptic properties of functional sauces with dietary supplements (Antonenko A. V., Ratushenko A. T., Gorkun A. O.)	356
--	------------

1. Scientific foundations and current state of sensory analysis of food products. Methodology for forming and training an expert commission	358
2. Research objects and methods. Development and profiling of organoleptic properties of functional sauces	365
3. Modeling consumer preferences and optimizing the recipe composition. Innovative approaches in quality control of functional sauces	371

Chapter 19

Consumer decision-making when purchasing food products from Ukrainian manufacturers (Riabinina N. O., Yaryi I. M.)	383
---	------------

1. Key factors influencing Ukrainian consumers' decisions	385
2. Factors influencing purchasing decisions and directions for the transformation of marketing strategies among Ukrainian companies in the industry	386
3. The company's marketing mix and measures for its improvement (using PJSC "MHP" as an example)	390
4. A study of factors influencing consumers of PJSC "MHP" and ways to improve the company's marketing activities	393

ENGINEERING AND TECHNOLOGICAL SUPPORT FOR FOOD PRODUCTION FACILITIES

Chapter 20

Rheological and structural properties of dairy products with different types of dispersed systems (Osmak T. H., Bandura U. H., Bass O. O.)	406
---	------------

1. Formation of rheological properties of fermented milk pastes with vegetable fillers	409
2. Formation of rheological properties of fermented milk pastes using unroasted buckwheat groats	412
3. Formation of rheological properties of ice cream mixtures	416

RESOURCE-EFFICIENT AND CIRCULAR TECHNOLOGIES IN THE FOOD INDUSTRY

Chapter 21

Energy-efficient drying technology for peppermint

(Mentha piperita L.) using a heat pump dryer

(Dabizha N. O., Dmytrenko N. V., Malashchuk N. S.) **429**

1. Characteristics of peppermint as a drying object 431

2. Materials and methods 434

3. Results of experimental studies 437

4. Development and creation of a heat pump dryer 450

Chapter 22

Technology and quality of shortbread confectionery with meal

(Kravchenko M. F., Mykhailyk V. S., Italliantsev V. V.) **460**

1. Analytical review of flour confectionery products 460

2. Substitution of the composition of model dough
for cookies using composite mixtures 462

Chapter 23

Study of the elastic-plastic properties of glued pig intestinal films subjected to tanning and plasticization

(Pak A. O., Onyshchenko V. M., Onyshchenko A. V.) **478**

1. The aim, objects, subject, materials and methods of the study 480

2. Results of the study and their discussion 482

Chapter 24

Resource-effective technology of agricultural raw material processing in completion of sustainable development strategy for sugar production (Simakhina G. O.) **491**

1. The analysis of the state and perspectives of resource-effective
technologies development for sugar production branch in Ukraine 492

2. Reasonable processing of secondary raw materials
in sugar production branch 497
